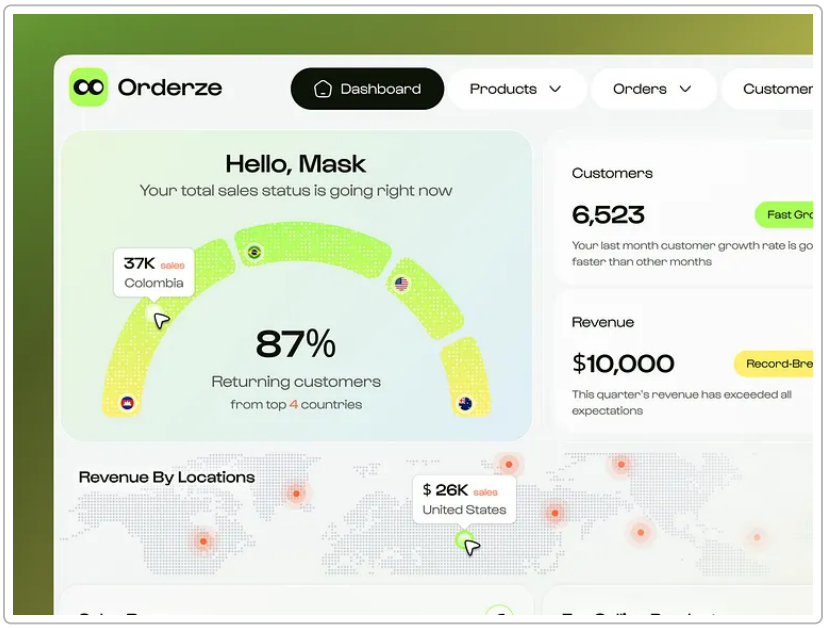
Admin Control Portal – Full Blueprint

We design a comprehensive **Admin Portal (Website)** for Locaura. The admin will manage **all operations** – users, retailers (stores), delivery partners, products, orders, and settings. This blueprint covers every page, field, data flow, and mockup needed.



Example Admin Dashboard. Notice summary cards (total users, orders, revenue) and visual analytics. A real admin panel (like Amazon or Zomato's) would show similar stats and quick links. For instance, a Zomato clone admin includes **Profile (restaurant) management, Food item management, and Order tracking** [1], analogous to our Retailer and Order sections.

---

1. User & Role Management

- **Roles:** SuperAdmin (full access), Admin (limited), Support.
- **User List Page:**
- Displays all registered users (customers). Fields: Name, Email, Phone, Join Date, Status (active/blocked).
- Actions: View profile, Edit (change status/password), Delete, Send notification.
- **Retailer List Page:**
- Fields: Store Name, Owner Name, Email, Registration Status (pending/approved), KYC status.
- Actions: Approve/Reject store, View/Edit store profile (as in Zomato's "Profile Management" [1]), Delete store, View store's products.
- **Delivery Partner List:**
- Fields: Name, Phone, Vehicle, Verification Status, Earnings.

- Actions: Verify docs (approve/reject), Activate/Deactivate partner, View assignments.
- **Admin Accounts:** Manage portal users who log in here. SuperAdmin can create new Admins, assign roles.

---

2. Product & Catalog Management

- **Category Management:**
- Create/Edit/Delete categories. Fields: Name, Icon/Photo.
- **Product / Item Management:**
- View all products uploaded by retailers.
- Fields: Product Name, Store, Category, Price, Stock, Status (active/inactive).
- Actions: Approve/Reject a newly listed product (before it goes live), Edit details, Remove product. This mirrors Amazon/Flipkart's product approval flows.
- **Inventory Control:**
- Adjust stock levels, or enable "Out of Stock" flags.
- **Bulk Upload:**
- CSV import for products (as seen on eCommerce admin tools).

---

3. Order Management

- **Order List:**
- Table of all orders. Fields: Order ID, User, Store, Rider, Amount, Status (Pending/Accepted/Picked/Delivered/Cancelled), Date.
- Filters by status, date, store.
- Actions: Cancel order (reason), Reassign rider, Issue refund.
- **Order Detail:**
- Shows order items, prices, delivery fee, payment method, timestamps for each stage.
- **OTP Field:** Verify delivery OTP if needed (per our OTP flow).
- **Action Buttons:** Change status (e.g. mark delivered), contact user/store.

---

4. User & Retailer Support

- **Support Tickets:**
- List of user/retailed-reported issues. Fields: Ticket ID, Raised by (User or Store), Subject, Status.
- Actions: Assign to support staff, Reply, Close ticket.
- **Messaging:**
- Dashboard to send system-wide announcements or direct messages to a user/store.

---

5. Payment & Settlement

- **Payment Dashboard:**

- Overview of total collected, payouts due.
- Graphs of revenue vs payouts.
- **Payout Management:**
- View and process payments to retailers and riders.
- Fields: Payee, Amount, Date, Status (paid/pending).
- Actions: Mark as paid, export payout CSV (similar to settlement tools).
- **Adjustments:**
- Issue refunds or credits. Enter reason and amount.

---

6. Ratings & Feedback

- **Review Monitoring:**
- List customer reviews of stores or riders.
- Fields: Reviewer, Target (store/rider), Rating, Comments, Date.
- Actions: Flag/delete inappropriate reviews.

---

7. Settings & Configuration

- **Basic Settings:**
- Company info (address, support email), push notification templates.
- **Delivery Fees:**
- Set distance slabs and fees (0–2 km = ₹30 etc).
- Platform commission percentage.
- **Content Management:**
- Manage homepage banners, app instructions, FAQs.
- **Admin Users:**
- Manage portal login credentials and roles (promote a user to Admin).

---

8. Data Schema & APIs

Key tables:

- **AdminUsers:** id, name, email, role, status.
- **Users (Customers):** id, name, email, phone, password, status.
- **Retailers:** id, store_name, owner_name, email, status, KYC_docs.
- **Riders:** id, name, phone, vehicle, status, verification.
- **Orders, Products, Categories:** (as defined for app).

APIs for admin actions:

- `GET /admin/users`, `GET /admin/retailers`, etc.
- `POST /admin/retailers/{id}/approve`
- `PUT /admin/order/{id}/status`

- `POST /admin/payouts`

These endpoints allow the admin portal to fetch/update data across the system. Permission middleware ensures only Admin role can access them.

---

9. Permissions & Audit

- **Permission Model:**
- SuperAdmin (all access), Admin (most sections except paying out platform), Support (only tickets/messages).
- **Audit Logs:**
- Record admin actions (who approved which store, who changed fees).
- Logs for transparency and troubleshooting.

---

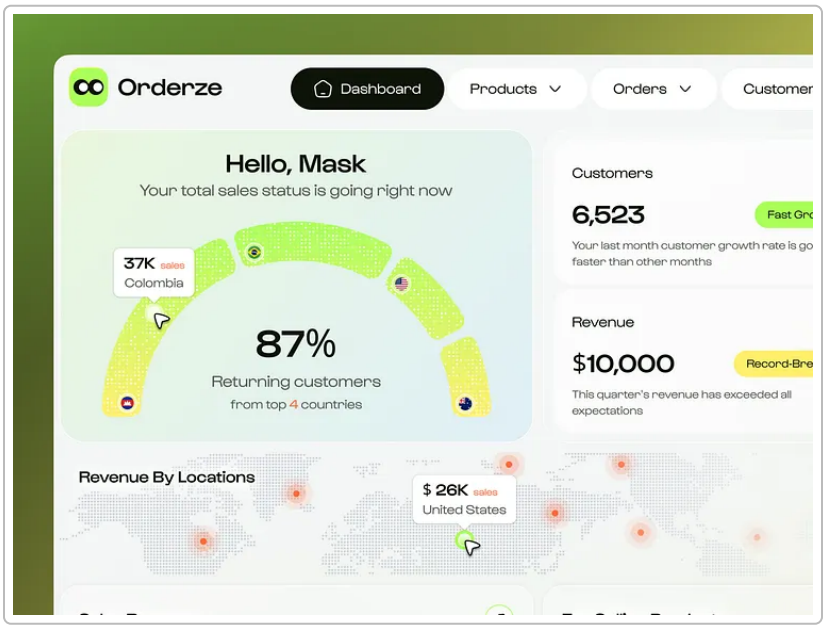
10. Wireframes & UI Components

Design the admin UI with side navigation (Users, Retailers, Riders, Products, Orders, Payments, Settings). Use data tables with search/filter. For example, the Dribbble dashboard [Orderze] shows key metrics and navigation [2].

Key UI patterns: - Data tables for lists (with paging). - Modals for editing records. - Forms for settings (simple inputs, toggles). - Charts (sales, user growth).

---

11. Example Screenshot (Admin Dashboard)



Mockup: An admin dashboard home showing total customers, orders, and revenue. Similar dashboards appear in e-commerce admin UIs [2], providing quick insights to the operator.

Summary

By surveying major platforms (Amazon, Flipkart, Zomato), we include all needed controls:

- Manage **Users/Accounts**
- Manage **Merchants (Retailers)**
- Manage **Delivery Partners**
- Oversee **Products and Inventory**
- Track **Orders and Payments**
- Configure **System Settings**

Everything is accessible and editable by the admin. You can now copy this detailed spec into your document for development.

Sources: Admin portal features are analogous to those in large marketplaces. For instance, a Zomato admin clone lists restaurant profile, menu, and order management [1]. We build on those concepts for Locaura's all-in-one admin console.
